(54) SILOXANE POLYMER AND RESIST COMPOSITION

(57)Abstract:

PURPOSE: To obtain a higher glass transition temp. and to improve oxygen plasma resistance by protecting a part or the whole of the hydroxyl group of specific polysiloxane with an alkyl group, substd. alkyl group, arom. group or silyl group.

CONSTITUTION: The chemical structure of a ladder type which adopts the siloxane bond as a skeletal structure and uses the multifunctional alkoxysilane as a raw material is adopted in such a manner and the hydroxyl group subjected to ring opening by the introduction of the oxysilane ring is protected by the suitable functional groups, by which alkaline development is enabled. The higher glass transition temp. is obtd. in this way and the oxygen plasma resistance is improved.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
